

Characteristics of Research Questions

- **clear:** it provides enough specifics that one's audience can easily understand its purpose without needing additional explanation.
- **focused:** it is narrow enough that it can be answered thoroughly in the space the writing task allows.
- **concise:** it is expressed in the fewest possible words.
- **complex:** it is not answerable with a simple "yes" or "no," but rather requires synthesis and analysis of ideas and sources prior to composition of an answer.

Why is a research question essential to the research process?

Research questions help writers focus their research by providing a path through the research and writing process. The specificity of a well-developed research question helps writers avoid the "all-about" paper and work toward supporting a specific, arguable thesis.

Steps to developing a research question:

1. *Choose an interesting general topic.* Most professional researchers focus on topics they are genuinely interested in studying. Writers should choose a broad topic about which they genuinely would like to know more. An example of a general topic might be "Slavery in the American South" or "Films of the 1930s."
2. *Do some preliminary research on your general topic.* Do a few quick searches in current periodicals and journals on your topic to see what's already been done and to help you narrow your focus. What issues are scholars and researchers discussing, when it comes to your topic? What questions occur to you as you read these articles?
3. *Consider your audience.* For most college papers, your audience will be academic, but always keep your audience in

mind when narrowing your topic and developing your question. Would that particular audience be interested in the question you are developing?

4. *Start asking questions.* Taking into consideration all of the above, start asking yourself open-ended “how” and “why” questions about your general topic. For example, “Why were slave narratives effective tools in working toward the abolishment of slavery?” or “How did the films of the 1930s reflect or respond to the conditions of the Great Depression?”
5. *Evaluate your question.* After you’ve put a question or even a couple of questions down on paper, evaluate these questions to determine whether they would be effective research questions or whether they need more revising and refining.
 - *Is your research question clear?* With so much research available on any given topic, research questions must be as clear as possible in order to be effective in helping the writer direct his or her research.
 - *Is your research question focused?* Research questions must be specific enough to be well covered in the space available.
 - *Is your research question complex?* Research questions should not be answerable with a simple “yes” or “no” or by easily-found facts. They should, instead, require both research and analysis on the part of the writer. They often begin with “How” or “Why.”
6. *Begin your research.* After you’ve come up with a question, think about the possible paths your research could take. What sources should you consult as you seek answers to your question? What research process will ensure that you find a variety of perspectives and responses to your question?
